

# CALL FOR PROPOSALS

## RESPONSIBLE AI

Since its erection in 1979, the Alcatel-Lucent Foundation has promoted "research on technical and economic developments and communication perspectives". Artificial Intelligence (AI) is a key technology which holds the promise of unlocking human capabilities at an unprecedented scale. However, report after report has highlighted the outcries of AI being biased, unfair, with lack of transparency and accountability. The recent release of ChatGPT raises additional questions about the validity and credibility of AI-generated statements and sources.

Against this background, the Alcatel-Lucent Foundation is calling for research proposals of up to

**275,000 € IN TOTAL.**

Researchers from any related field can apply for the entire or only a partial sum (depending on the applications received, up to 3 projects can be approved and funded). Funding periods should not exceed a maximum of 2 years.

The funds are meant

- » to develop methods to define, detect, and correct potential bias (both in data and model) in AI systems, or
- » to develop methods to identify invalid or unsubstantiated statements made by AI-systems, or
- » develop guidelines on how to deal with AI statements and sources, both for private individuals or for companies and public institutions, or
- » to build a holistic framework for AI explainability and transparency.

The call for proposals is deliberately designed as a broad ideas competition in order to support as diverse and innovative projects as possible.

Universities and independent research institutes are eligible to apply as long as they are exempt under tax law. Non-exempted institutes can only be supported as part of cooperation projects. Personnel, material and travel expenses can be applied for. Flat-rate overheads are not covered.

Decision criteria are primarily the project's originality and innovativeness, the validity of its methodology and the assessment as to whether the objectives set can be achieved within time.

The required documents are to be sent in pdf format by e-mail to

Alcatel-Lucent-Stiftung für Kommunikationsforschung

Ms. Lara Straatmann

Baedekerstr 1, 45128 Essen

T 0201 8401-248

**UNTIL 30 APRIL 2023.**

Application documents (15 pages maximum) should include

- » a summary of the state of research,
- » a clearly formulated objective,
- » detailed descriptions of the methodology,
- » work and time schedules,
- » a short (!) list of the applicant's main publications relevant to the project, and
- » brief (!) descriptions of the scientific careers of all applicants,

Applications can only be considered if they are complete.

The Foundation's Board of Trustees decides on the allocation of research funds.

Legal action against the decision of the Board of Trustees is excluded.
